Creatine (/ ˈkriːtɪn / or / ˈkriːtɪn / is an organic compound with the nominal formula (H<sub>2</sub>N)(HN)CN(CH<sub>3</sub>)CH<sub>2</sub>CO<sub>2</sub>H. This species exists in various modifications in solution. Creatine is found in vertebrates where it facilitates recycling of adenosine triphosphate (ATP), the energy currency of the cell, primarily in muscle and brain tissue. Recycling is achieved by ...

Creatine kinase (CK) is an enzyme, found primarily in muscle and brain tissue, which exists as three dimeric isoenzymes: CK-MM (CK-3), CK-MB (CK-2), and CK-BB (CK-1) built from subunits designated M and B.

### **120816: Creatine Kinase (CK), MB | LabCorp**

Studies continued throughout the early 1900s with researchers discovering the existence of phosphocreatine, and creatine kinase as well as the fact that creatine supplementation in animals increased muscle creatine content [1].

### **Super Supplement Feature: Are They Superior to Monohydrate**

Biological relevance. Serum creatinine (a blood measurement) is an important indicator of renal health because it is an easily measured byproduct of muscle metabolism that is excreted unchanged by the kidneys. Creatinine itself is produced via a biological system involving creatine, phosphocreatine (also known as creatine phosphate), and adenosine triphosphate (ATP, the body's immediate energy ...

Exercise, intramuscular injections, myxedema, grand mal seizures, prior trauma or surgery, and acute MI very early or late lead to the combination of increased total CK but usually normal CK-MB.

1. Introduction. Acute rhabdomyolysis is a life-threatening condition. In adults it is typically due to trauma, intoxication or infection, whereas in children with recurrent rhabdomyolysis, inherited muscle disorders are frequent. The two commonest causes of early onset recurrent, severe rhabdomyolysis in children are fatty acid oxidation disorders and mutations in the LPIN1 gene that ...

The appearance of creatine kinase (CK) in blood has been generally considered to be an indirect marker of muscle damage, particularly for diagnosis of medical conditions such as myocardial infarction, muscular dystrophy, and cerebral diseases. However, there is controversy in the literature concerning its validity in reflecting muscle damage as a consequence of level and intensity of physical ...

La créatine kinase (CK), anciennement appelée phosphocréatine kinase ou créatine phosphokinase (CPK) est une enzyme (EC 2.7.3.2) exprimée par divers types de tissus. Dans la mitochondrie, où la concentration d'ATP est toujours très importante, elle a pour fonction de catalyser la conversion de la créatine en phosphocréatine, impliquant la conversion de l'adénosine triphosphate (ATP ...

To examine the physiological relevance of adipose tissue creatine metabolism, we deleted the rate-limiting enzyme of creatine biosynthesis selectively in adipose tissue (Figure 1A). Adenoviral delivery of Cre

recombinase significantly reduced Gatm transcript levels in primary brown adipocytes from Gatm flox/flox (flox) animals, relative to GFP virus (Figure 1B).

Biosynthèse. La créatine est naturellement produite ou synthétisée dans le corps humain à partir de certains acides aminés (glycine, arginine et méthionine) dans le foie, le pancréas et les reins. Chez les omnivores, la synthèse endogène représente la moitié de l'apport en créatine ; l'autre moitié provient de la nourriture (principalement de la viande et du poisson, 500 g de ...

### **Créatine – Wikipedia**

INTRODUCTION – A group of patients with non-small cell lung cancer (NSCLC) have tumors that contain an inversion in chromosome 2 that juxtaposes the 5' end of the echinoderm microtubule-associated protein-like 4 (EML4) gene with the 3' end of the anaplastic lymphoma kinase (ALK) gene, resulting in the novel fusion oncogene EML4-ALK [1]. This fusion oncogene rearrangement is transforming both ...
