

### **dna fingerprinting in plants pdf**

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 ÅngstrÅ¶ms (3.4 nanometres).

### **DNA - Wikipedia**

Two kinds of techniques, DNA fingerprints and DNA barcodes, have revolutionized the identification of individual organisms and species. The use of these techniques does not alter the DNA of the organism and does not involve genetic engineering. Prof. Joe Cummins

Cloning is the process of producing genetically identical individuals of an organism either naturally or artificially. In nature, many organisms produce clones through asexual reproduction. Cloning in biotechnology refers to the process of creating clones of organisms or copies of cells or DNA fragments (molecular cloning). Beyond biology, the term refers to the production of multiple copies of ...
