

elevator traffic analysis design pdf

An elevator (US and Canada) or lift (Commonwealth countries) is a type of vertical transportation that moves people or goods between floors (levels, decks) of a building, vessel, or other structure. Elevators are typically powered by electric motors that either drive traction cables and counterweight systems like a hoist, or pump hydraulic fluid to raise a cylindrical piston like a jack.

Elevator - Wikipedia

A space elevator is a proposed type of planet-to-space transportation system. The main component would be a cable (also called a tether) anchored to the surface and extending into space. The design would permit vehicles to travel along the cable from a planetary surface, such as the Earth's, directly into space or orbit, without the use of large rockets.

Space elevator - Wikipedia

Elevator Control System is the system responsible for coordinating all aspects of elevator service such as travel, speed, and accelerating, decelerating, door opening speed and delay, leveling and hall lantern signals. It accepts inputs (e.g. button signals) and produces outputs (elevator cars moving, doors opening, etc.).

This chapter discusses bicycle parking, storage and changing facilities. Description. Bicycle Parking, storage and shower/changing rooms (collectively called end of trip facilities) are important ways to provide convenience and security for cyclists at destinations. Inadequate facilities and fear of theft are major deterrents to bicycle transportation.
